CloudDFNZ

MANAGED NETWORK GATEWAY PROTECTION & SECURITY

CloudDFNZ (cloud dee-fens) is a managed cloud-delivered gateway security service that protects your organization from online security and eliminates malicious content at the source. Without investing on any hardware and license costs, CloudDFNZ can secure you in minutes.

Web Content Filtering

Increase productivity with advanced, real-time content filtering that blocks access to unsafe websites.

Protection against Online Threats, prevent Cyber Attacks

Traditionally, preventing malware and botnet attacks can be costly and labor intensive–requiring expensive hardware appliances deployed on site. We enable a seamless addition of malware/threat detection and prevention capabilities in minutes.

Increase Productivity

Employees can waste a staggering amount of time on the Internet – allowing open access to all website content can result in a considerable cutback in productivity.
Establish a safe and acceptable use of the web for your employees by limiting access to inappropriate web content, social networks, gaming, entertainment, and other sites that raise liability or promote idleness.

COST BENEFITS

ZERO HARDWARE COST!

NO ANNUAL LICENSES!

SAVE ON LABOR

NO NEED FOR NETWORK STAFF

Off Network Protection

CloudDFNZ has roaming clients on every major platform, including Windows, MacOS, iOS, Android, and ChromeOS. You can prevent access to unwanted and malicious content on all devices, both inside and outside your network. The roaming clients give you enhanced control, visibility, and reporting of all the devices in use by your organization. This way, you never have to worry about installing patches – your filtering policies are stored in the cloud.

Powered by Artificial Intelligence AI

CloudDFNZ's domain analysis is powered by A.I. This allows us to identify malicious domains and undesirable content real-time and constantly keep our data up to date, providing an unrivaled level of protection by eliminating major threat vectors. Rest assured – you're protected

Network Monitoring

Maintain full network visibility by discovering traffic patterns, usage logs, and real-time incidents affecting your network performance.

Administration Support

In keeping your network fast and secure, let our network engineers provide you the LAN administration support you need to remotely resolve issues fast and recommend the best solutions. This also includes Firewall, Intrusion Prevention, WiFi, and Acceptable usage policy enforcement.

Managed Bandwidth

Control which categories or domains your users can access. This level of control allows you to block bandwidth-intensive sites, such as streaming media, peer to peer, file sharing, or even access to copywritten content. In addition to protecting network devices and users, you can free up valuable bandwidth to keep your business
