WiFLY
PRIVATE NETWORKS

MANAGED PRIVATE WAN

Connect your head office, branches, and remote workers in a secure managed private network!

WiFLY Networks is an innovative way to connect your remote branches and workers by offering reduced spending on expensive leased line and security appliances and removing the headaches of managing it.

For years, our top-notch support team has delivered value to various industries such as retail, manufacturing, pharmaceutical, logistics, distribution, and more.

Secure your Branch Network

Our managed private WAN solution delivers site-to-site encryption for data privacy, as well as threat protection, web access security policy, and traffic control.

Reduce the Cost of Connectivity & Security

WiFLY Networks is an Infrastructure-as-a-service (IAAS) that delivers tremendous savings by eliminating investments on network security appliances, annual subscriptions, and feature upgrade premiums. Replace your MPLS and other expensive TELCO transport services with a managed SDWAN over affordable broadband links.

Simplify your Network Infrastructure

No complex systems or boxes to manage – we deliver fast activation and painless administration. A single-point-of-contact to manage the last mile, virtual network functions, security, and visibility of your WAN infrastructure!

Increase Mobility & Productivity

WiFLY Networks offers connected mobile work-from-home users to our integrated virtual PBX unified communications with free web meeting that enhances overall mobility, collaboration, and productivity!

Legacy WAN Setup

Traditional WAN Architecture includes the use of expensive TELCO leased lines, such as MPLs, Metro-Ethernet, or IPVPNs for connectivity – this setup requires investing in network security appliances, from next-gen firewalls to unified threat management to bandwidth managers. This solution is more complex, high-cost, and less feasible for work-from-home scenarios.
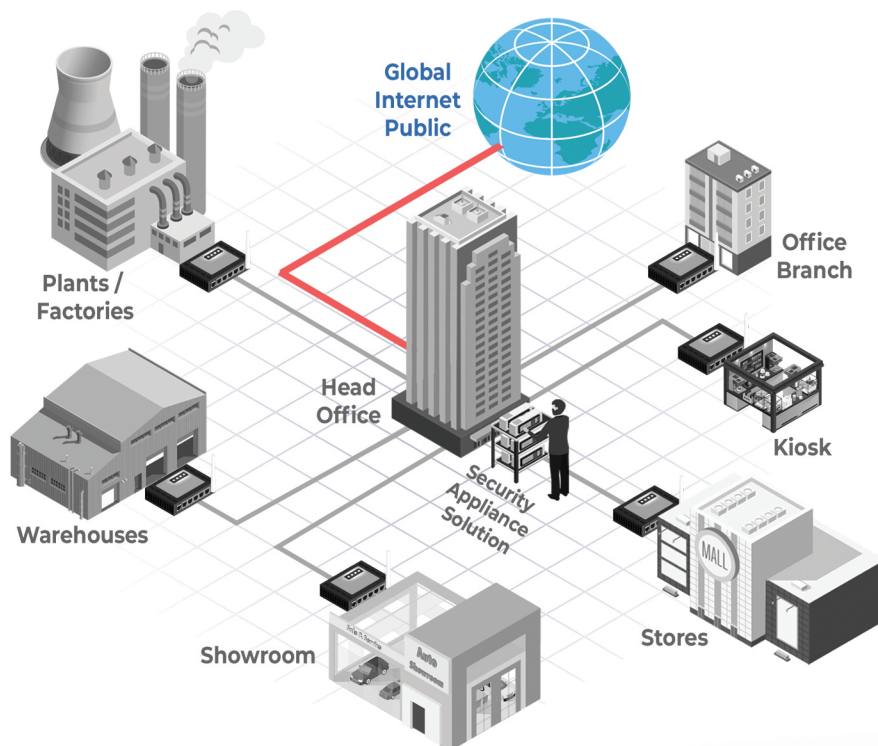

NETWORK SECURITY APPLIANCE CHALLENGES

HIGH COST
- Large investment on hardware
- Per user license - software cost
- Annual Support Agreement - Vendor

HIGHLY-COMPLEX
- Need careful maintenance
- Risky patching
- Constant admin skills updating

HIGHLY-DEPENDENCE
- Upgrade to scale
- Performance & security degradation

WiFLY Managed Private WAN

WiFLY easily connects physical locations, cloud resources, and mobile work-from-home users to your head office network. IT teams would immediately benefit from the agility of a unified network and security service that has better network support SLA and redundant connectivity.

WiFLY NETWORKS ADVANTAGES

COST-EFFICIENT
- No hardware investments
- No software per user/module license cost
- No annual maintenance agreement

SIMPLIFIED INFRASTRUCTURE
- Secure broadband access from WiFLY
- Network support SLA
- Failover links for higher uptime
- Telco agnostic

SECURE
- Site-to-site encryption
- DNS protection to internet
- Stateful firewall for anti-dos attacks
- Threat protection

MOBILITY & PRODUCTIVITY
- Web control & content filtering
- Work-from-home roaming capabilities
- IPPBX interbranch calling
